SplitSplit

A simple way for roommates to track shared expenses

Flutter app proposal

The problem and our target users

Why this matters in shared student housing

The problem

- Roommates buy groceries, utilities and supplies at different times.
- It can be hard to remember who paid and how much others owe.

Target users

University students in Tashkent sharing rented apartments

What our survey tells us

12

participants surveyed

8 of 12

reported a difficulty

Telegram

most common method

Our proposed solution

One clear purpose: record expenses and see balances

SplitSplit lets roommates record a shared purchase, choose who shared it and view automatically calculated amounts owed.

- All amounts are shown in Uzbek soums (UZS).
- SplitSplit does not ask for payment cards or transfer money.

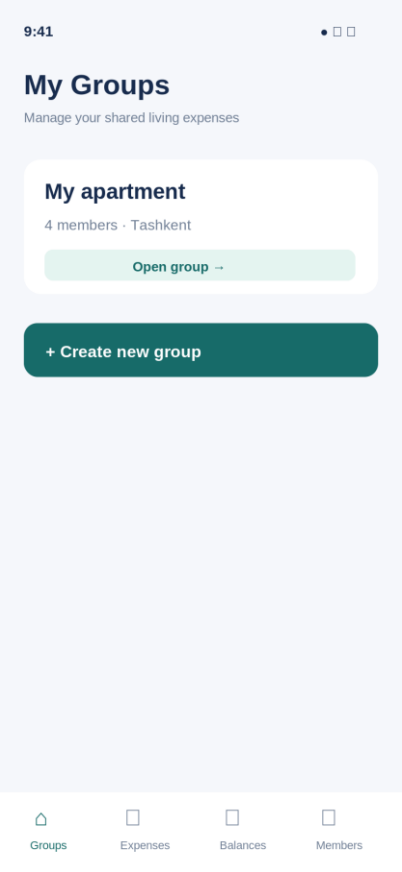

How a student would use SplitSplit

1 **Open group** → 2 **Add expense** → 3 **Select roommates** → 4 View balances → 5 Record repayment

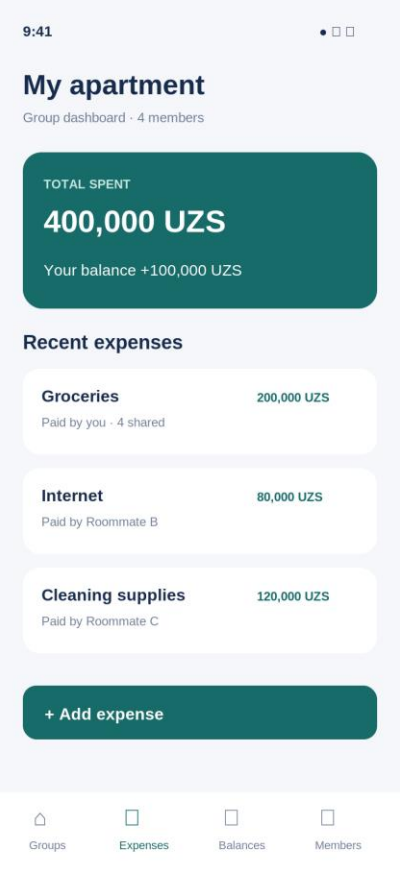

Example: 200,000 UZS shared by 4 roommates = 50,000 UZS per person.

Group Dashboard

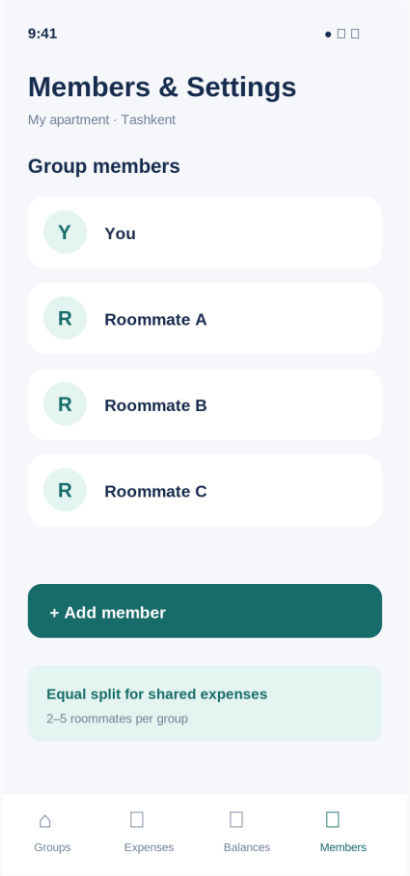

Add Expense

Screen sketches · Part 2

Simple screens to view balances and group members

Settle Up

Members & Settings

How we plan to build it in Flutter

Interface	Scaffold · ListView · Card · ElevatedButton
Input	TextFormField with basic validation
Navigation	Navigator.push() and Navigator.pop()
State	Riverpod NotifierProvider for the expense list

Data model and what is out of scope

Roommate	id, name
Group	id, name, members
Expense	id, description, amount, paidBy, sharedWith, groupId

Out of scope

No bank payments
No user accounts
No cloud synchronization
No permanent storage

All balances are calculated from entered expenses.
